Introduction

- Equal opportunity principle in meritocratic societies
 - ▶ The social position an individual can achieve should only depend on own effort/merit, but not on *ascriptive* characteristics such as, e.g., social origin or gender.
- Societies in which equal opportunity is granted are called “open”. They are characterized by high *social mobility*.
 - ▶ Mobility is usually understood as “equality of opportunity” – the outcomes may be unequal, but everyone, regardless of starting point, can have the same opportunity to get a good result. (Hout 2004: 970)
- To evaluate the openness of a society we can therefore analyze the degree to which the social position of an individual depends on the status of the individual's parents.
